I am currently beginning my career in software development. I am completing a full-stack coding bootcamp with the University of Birmingham, and am also completing a level 3 Software Development Technician apprenticeship with Baltic Apprenticeships. I am a fast learner a strong team player, and am building proficiency in JavaScript, Express, React, PHP and Laravel. My diverse experience in the implementation of different programming languages, has enabled me to build a strong understanding of programming concepts early in my career, and I am keen to build on this understanding and progress mt career in future roles.

LANGUAGES & SKILLS

Languages & frameworks: JavaScript, Express, MySql, MongoDB, PHP, Laravel, AWS JawsDB, AWS S3 Bucket, GitHub
Skills: Collaborative Development, Project Management (small-scale), User-Interface Design
Strong knowledge of programming fundamentals
Experience with agile development methodology

PROFESSIONAL EXPERIENCE

Central Learning Partnership Trust, Dec 2021-Present

In my role as an apprentice web-developer for Central Learning Partnership Trust, I have been learning PHP and Laravel, as well as programming concepts and paradigms such as Object-Oriented Programming and MVC, and am applying this in workplace projects in collaboration with a team of two other developers.

EDUCATION

Full-Stack Developer Coding Bootcamp, University of Birmingham, Dec 2021 - Present

In December 2021 I enrolled in a coding bootcamp with the University of Birmingham, which has proved to be invaluable to my learning and growth as a developer. Throughout this course I have built a strong understanding of programming concepts, paradigms, and development methodologies, and have had ample opportunity to implement the agile development methodology in the two projects that I have completed so far. This course has given me invaluable experience in collaborative development, as well as collaborative project management

PROJECTS

As part of the University of Birmingham Coding Bootcamp, I have so far taken part in two group projects, and am in an early preparation and planning stage for a 3rd and final group project.

Macro Meals
Macro Meals is an interactive meal planning app designed to provided personalised calorie suggestion as well as recipe ideas. This app was build over a 2-week period using agile methodology by continuously building towards and upon an agreed minimum viable product. The app makes use of two 3rd party apis and displays data in an intuitive manner.

Solo Traveller
Solo Traveller is a social media and advertising platform, which targets the gap-year travel industry. Providing a place for gap-year travel companies to advertise trips, and allow users to interact with others who are also interested in this type of travel. The app makes use of JawsDB to store user-data, and AWS S3 Bucket to store user profile images and trip images.
